

On Site Testing Facilities

Fully equipped mobile laboratory services

Laboratory tests can be performed to obtain further information about the soil types found or to gain a clearer insight into the parameters important to estimate hydrological effects. To improve efficiency and reduce time and costs during a project Wiertsema & Partners International and sister company Marine Sampling Holland have built a fully equipped mobile laboratory in a 20 ft container to conduct on site testing. This mobile laboratory can be used on land and sea and can be shipped to every location in the world.

The mobile laboratory is equipped with testing facilities for testing in the field of soil mechanics, environment and hydrology. Especially for complex long term projects in remote areas utilizing this mobile laboratory on site offers great benefits. The mobile laboratory avoids the transport of samples from remote sites and the process of obtaining exporting documents.

All tests are performed according to the Dutch and international standards (NEN, EU, DIN, ASTM and British Standards). We are ISO 9001 and VCA** certified.

The tests are carried out by a team of laboratory technicians with worldwide experience. The technicians are supported by the employees from our geotechnical laboratory in the Netherlands.
